Summary

Full-stack developer with 4 years of experience building enterprise and government systems with .NET, Laravel, and React/Next.js, including 2.5 years working full-time while completing a Bachelor of Computer Science (GPA 3.84). Delivered core modules of Indonesia's national diploma numbering platform (PISN, 9.2M+ diploma numbers issued), a BCA SNAP payment integration, and an offline-first healthcare PWA. Mentors developers through code reviews and pair debugging.

Working Experience

Senior Programmer at Bina Nusantara IT Division | Apr 2026 – Present

- Building an offline-first PWA for a national occupational health provider, letting branch staff register patients, print QR control cards, and import patient data without internet, with automatic sync on reconnect (Next.js, Laravel, IndexedDB).
- Prevented duplicate registrations and cross-device data conflicts by designing the PWA's sync layer (idempotent sync, conflict resolution, incremental downloads, role-scoped endpoints); covered with PHPUnit tests.
- Migrated BINUS Career's BCA Virtual Account payments (130,000+ alumni network) to Bank Indonesia's SNAP open-API standard in .NET 8, adding signature verification and duplicate-payment protection; passed BCA's multi-stage UAT.
- Extended BINUS Career with checkout voucher logic, a token-secured public Open API, and scheduled Instagram auto-posting of partner job listings (Hangfire, Meta Graph API).
- Cleaned and migrated ~4M legacy student records from the old PDDIKTI data source to the new one using Laravel scripts.
- Sped up code reviews for a 4-person BINUS Career team using AI-assisted first-pass reviews (Claude, Codex) that I validate before approval; guide teammates through technical problem-solving.

Programmer at Bina Nusantara IT Division | Apr 2024 – Apr 2026

(Full-Time, Concurrent with Studies until April 2025)

- Owned the Alumni Update module of the BINUS Alumni Dashboard (React, .NET), which manages 130,000+ alumni records, over a 5-month delivery: change history, bulk Excel updates (1,000 rows per upload), and campus-scoped approvals with email notifications.
- Made Prominent Alumni queries 10× faster by rewriting them with server-side pagination; eliminated export timeouts with a Hangfire background job (retry and paging).
- Fixed out-of-memory build failures in the Azure DevOps pipeline by refactoring memory-heavy frontend code with a colleague, without upgrading build hardware.
- Rescued the stalled Student Violation project after the original developer's work proved unreliable, delivering the Appeal module end-to-end (React, .NET) within two weeks.
- Built Company Registration and Voucher Coupon features from scratch for BINUS Career (React), plus reusable table and select components for the Alumni Dashboard.
- Led a React best-practices and performance workshop for ~20 developers.

Junior Programmer at Bina Nusantara IT Division | Sep 2022 – Apr 2024

(Full-Time, Concurrent with University Studies)

- Built the core operator modules (eligibility checks, certificate enlistment, bulk certificate generation) of PISN, the platform Indonesian universities are required to use to issue national diploma numbers, now used by 8,200+ operators with 9.2M+ numbers issued.
- Developed the admin review workflows of PILN (foreign diploma recognition) that ministry validators use to process diploma equalization and score conversion requests.
- Mentored 7 associate developers across both projects (3 on PILN, 4 on PISN) through PR reviews and pair debugging.
- Remediated medium-to-critical findings from the ministry's penetration test on PISN, flagged false positives, and removed ~10.5K lines of unused legacy code to shrink the attack surface.
- Collaborated with the System Analyst on ERD and UI/UX design for PILN admin modules; integrated Google reCAPTCHA into authentication forms.

Independent Projects

Freelance Full-Stack Developer | SanLogistic, Fleet & Logistics Platform | Mar 2022 – Present

- Built and maintain a fleet operations platform used by 170+ registered drivers since 2022 (Laravel, MySQL): a mobile driver app for trip logging, expense claims, and GPS location snapshots.

- Replaced Excel and paper-receipt tracking with a digital back office: bulk finance approval of driver expenses with Excel/PDF reports, distance-based incentive calculation, and a 57-item vehicle inspection checklist.
- Secured access with 45 granular role permissions and prevented duplicate concurrent trips using row-level database locking.

Education

Bina Nusantara University – Jakarta, Indonesia

Bachelor of Computer Science (2020 – 2025) | GPA: 3.84 / 4.00

Skills

- Languages: C#, PHP, TypeScript, JavaScript, SQL
- Backend: ASP.NET Core, Entity Framework Core, Laravel, Hangfire
- Frontend: React, Next.js, Redux Toolkit, TanStack Query, PWA (Service Worker, IndexedDB/Dexie)
- Databases: SQL Server, MySQL, PostgreSQL
- API & Security: RESTful API design, JWT, HMAC request signing, Azure AD (MSAL)
- DevOps & Testing: Git, Docker, Azure DevOps Pipelines, GitHub Actions, PHPUnit
- AI-Assisted Development: Claude, OpenAI Codex, Google Antigravity

Languages

- Indonesian: Native
- English: C2 Proficient (EF SET 77/100)
